

# IC-49-AUD-01, 02, 03, UNI

## Audi CANbus steering control interface

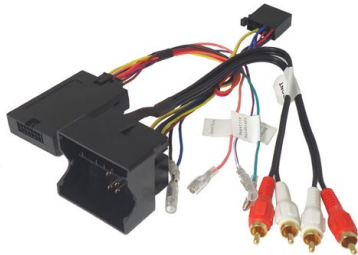

IC-49-AUD-01

ISO and Mini ISO  
Rear amplified speakers

IC-49-AUD-02

Quadlock  
Rear amplified speakers

IC-49-AUD-03

Quadlock  
Fully amplified  
4x Phono pre-outs

IC-49-AUD-UNI

Universal lead  
For use with 20-276 and  
20-270-CAN

### Steering control functions

|              |                           |                       |
|--------------|---------------------------|-----------------------|
| Volume up    | Volume up                 |                       |
| Volume down  | Volume down               |                       |
| Track up     | Track up                  |                       |
| Track down   | Track down                |                       |
| " < " button | short press = mute        | long press = preset + |
| " > " button | short press = answer call | long press = end call |

|                         |                                                                                            |                       |
|-------------------------|--------------------------------------------------------------------------------------------|-----------------------|
| Volume up               | Volume up                                                                                  |                       |
| Volume down             | Volume down                                                                                |                       |
| Track up                | Track up                                                                                   |                       |
| Track down              | Track down                                                                                 |                       |
| " MODE " button         | Change source (Cars without original hands free)                                           |                       |
| " < ( " button          | Mute (for cars with original hands free long press for mute, short press to change source) |                       |
| Push right scroll wheel | Preset +                                                                                   |                       |
| Push left scroll wheel  | Short press = answer call                                                                  | long press = end call |

### Interface features

|                      |             |
|----------------------|-------------|
| Ignition output      |             |
| Illumination output  |             |
| Reverse gear output  | Purple wire |
| Speed pulse output   | Pink wire   |
| Parking brake output | Green wire  |

### IC-49-AUD-UNI wiring

|           |                     |
|-----------|---------------------|
| Brown/red | CAN high            |
| Brown     | CAN low             |
| Red       | Ignition output     |
| Purple    | Reverse gear output |
| Orange    | Illumination output |
| Pink      | Speed pulse output  |
| Green     | Handbrake output    |
| Yellow    | +12V input          |
| Black     | Ground              |
