

Parrot MKi9200™

Bluetooth® Hands-Free Car Kit

www.parrot.com

Parrot MKi9200

The new standard

The premium kit in a series of new Parrot car kits, the MKi9200 offers a higher level of technology and performance. Features include a larger detachable color dash screen, user-independent voice recognition, voice synthesis (text-to-speech), wireless remote control and dedicated connections for MP3 and other music sources. It even has an SD card slot for music.

Hands-free with more

The MKi9200 automatically synchronizes your cell phonebook each time you add a contact name. And, when you speak the name, the call is automatically dialed. Browse the phonebook and listings will be spoken to you out loud. Caller I.D. is announced and, if included in your phonebook, a color photo of the caller will come on screen. When a call comes in, the MKi9200 automatically mutes the car stereo and the caller's voice comes through the speakers.

You're in control

You control the MKi9200 phone and music functions, and the information that appears on the screen, with a wireless remote that can be mounted on the steering wheel or anywhere on the dash. Phonebook contacts, calling information and music playback information are displayed on the dash-mounted 2.4" color TFT screen - which detaches for theft prevention.

Music from everywhere

Listen to your MP3 playlist come alive with the amazing connectivity of the MKi9200. You can stream music from your phone or other Bluetooth stereo (A2DP) device or use the iPod®/iPhone™ direct connections that include battery charging. An SD card slot lets you plug in up to 32GB of music. A dedicated USB connection accepts flash drives and MP3s, and a 3.5 mm input jack lets you plug in analog music players.

Power and vision

However you connect, the MKi9200 has a built-in digital 20-watt amplifier to give your music a boost in power and fidelity. Put CD covers or photos of your favorite performers on the screen.

Seamless integration

The Parrot MKi9200 is designed to achieve an OEM quality installation in any vehicle. And like all Parrot hands-free Bluetooth car kits, if desired, the remote control functions can be interfaced with your vehicle's original equipment steering wheel audio controls using an optional available Parrot harness.

Double Microphone

Mute Box

Dash-Mount TFT Screen

Wireless Remote Control

Professional installation recommended.

Wireless technology

Bluetooth enables voice, data and music to be sent via a short-distance radio link. It connects a wide range of electronic equipment without requiring additional cables. And, it extends the communications possibilities for cell phones and a large number of devices. The Bluetooth stereo (A2DP) profile uses the same radio frequencies and allows the sending of music files from one device to another.

Phone & device compatibility

Parrot products are 100% Bluetooth compatible and compatible with virtually every Bluetooth-enabled cell phone, smartphone, PDA and iPhone™. If you like, you can visit our website to confirm that your cell phone is compatible: www.parrot.com

Technical and commercial specifications

Parrot MKi9200
